

FIRST NATIONS MEDIA ARCHIVES

Digital File Naming Conventions

THE BASIC PRINCIPLES

In the management of First Nations media archives Aboriginal and Torres Strait Islander knowledge and Law are the guiding principles.

Local Aboriginal and Torres Strait Islander peoples are essential cultural authorities at the centre of all decision making associated with management of the archives.

SECTION 1 SIMPLE FILENAMING CONVENTIONS

1 File names

A simple file naming convention could comprise the following five components:

Code for	Running	Part number	Preservation or	File format
the media	number (4	(3 characters)	access code ² (2	code (up to 8
category	2 characters)		characters)	characters)
character	s) ¹			

Example:

Code for the media category (2 characters)	Running number (4 characters)	Part number (3 characters)	Preservation or access code (2 characters)	File format code (up to 8 characters)
SI	0098	025	PM	tiff

This would be expressed as SI-0098-025-PM.tiff, and can be decoded as:

- A still image.
- The ninety eighth (98th) media item/set catalogued.
- The twenty fifth image in that ninety eighth (98th) catalogued item
- A preservation media item
- In tiff format.

The location code would be included in the relevant field (suggested as Location Code) in the Archive's database.

¹ See Appendix 1 for suggested codes.

² This component may be usefully extended to also include codes for rushes (RU) or for broadcast masters (BM).

2 Folders/directories

Digital files need to be stored³ within folders/directories on hard drives⁴. A simple way of organising the folders/directories on the relevant drives is to use the media category as the top level name for the folder/directory, followed by preservation/access type as subfolder/subdirectory.

For example:

- Still Image>PM
- Moving Image>PM
- Audio>PM
- Still Image>AC
- Moving Image>AC
- Audio>AC

³ For security purposes preservation media needs to be stored in 3 locations. These can include local storage with drives in different physical locations, with regular back up, shared cloud storage, or Virtual Private Networks.

⁴ See the Digital Storage documents at https://www.firstnationsmedia.org.au/fnma-archiving-resources

SECTION 2 MORE DETAILED FILE NAMING CONVENTIONS FOR MEDIA MANAGEMENT NEEDS

1 File names

A more detailed file naming convention could comprise the following seven components:

Code for the media	Year (4	Production running	Part	Media	Preservation	File format
	characters)	number within the	number (3	title key	or access	code (up to
category (2 characters)		year	characters)	words (as set by Archive)	code⁵ (2 characters)	8 characters)

For example:

Code for the	Year (4	Production	Part	Media title key	Preservation	File format
media	characters)	running number	number (3	words (as set	or access	code (up to
category (2		within the year	characters)	by Archive)	code ⁶ (2	8
characters)					characters)	characters)
SI	2012	0098	025	SportsWeekend	PM	tiff

This would generate the following file name **SI-2012-0098-025-SportsWeekend-PM.tiff**, decoded as:

- A still image.
- Taken in 2012.
- Created as part of the ninety eighth (98th) production (or catalogued item) of 2012.
- The twenty fifth image in that ninety eighth (98th) production/catalogued item.
- A preservation media item.
- In tiff format.

The use of SportsWeekend as the fifth component of the file name is a simple way to enable a visual scan of the file directory of a digital drive when looking for specific content. It can also be used by Digital Asset Management Systems such as Neofinder to locate files matching search terms.

⁵ This component may be usefully extended to also include codes for rushes (RU) or for broadcast masters (BM).

⁶ This component may be usefully extended to also include codes for rushes (RU) or for broadcast masters (BM).

2 Folders/directories

Digital files need to be stored⁷ within folders/directories on hard drives⁸. It is strongly suggested that preservation media and access media be stored on separate drives.

A simple way of organising the folders/directories on the relevant drives is to use a year as the top level folder/directory with the media categorisation (preservation or access), followed by media types as subfolders/subdirectories⁹. For example:

• 2012>PM>Still Image

• 2012>AC>Still Image

2012>AC>Moving Image

- 2012>PM>Moving Image
- 2012>AC>Audio

- 2012>PM>Audio
- Whilst it may seem that this is a repetition of components of the filename it is important to remember that:
 - Files are easily "lost" without a coordinated approach to storage locations.
 - Files can be moved accidentally and become "orphaned".

The use of media type, media category and year codes ensures that files can be properly stored from the start and maintained in their correct folder/directory location.

⁷ For security purposes preservation media needs to be stored in 3 locations. These can include local storage with drives in different physical locations, with regular back up, shared cloud storage, or Virtual Private Networks.

⁸ See the Digital Storage documents at https://www.firstnationsmedia.org.au/fnma-archiving-resources

⁹ Additional folders/directories may be useful for rushes, as well as for broadcast masters for TV or radio.

SECTION 3 FILE NAMES AND CULTURAL PROTOCOLS

1 Introduction

Before committing to a file name convention, codes relevant to culturally restricted media need to be considered. The Archive's Cultural Plan, as developed in consultation with the Archive's cultural custodians, is the primary source of information for this decision making stage.

The Cultural Plan will ideally have identified protocols for the layout and access

arrangements for the Archive. These may include a separation of:

- Men's and women's restricted media into different areas of the Archive or across different digital drives.
- Sorry media in physical or digital areas that need approved access.
- Culturally restricted media in locked cupboards or password protected digital drives.

2 Including a cultural restriction code

A useful location for the restriction code is following the Preservation or Access code as

follows:

Code for	Year (4	Production	Part	Media	Preservation	Restriction	File format
the media	characters)	running	number (3	title key	or access	code (3	code (up to
category (2		number	characters)	words	code ¹⁰ (2	characters)	8
characters)		within the		(as set	characters)		characters)
		year		by			
				Archive)			

An Archive may:

- Choose to create separate folders/directories and/or drives for different cultural restrictions according to the Cultural Plan; or
- Where the culturally restricted digital preservation media is stored together on a drive, the use of a cultural restriction code in the filename will inform Archive staff of what they can look at/listen to according to their own cultural status.

¹⁰ This component may be usefully extended to also include codes for rushes (RU) or for broadcast masters (BM).

SECTION 4 COORDINATING FILE NAME ALLOCATION

Keeping track of running allocations needs coordination to ensure that numbers aren't skipped or duplicated. To achieve this, the relevant file directory should be sorted by file name to identify the next available running number.

APPENDIX 1

Suggested values for code components

Media category code

- SI for still images (photographs, etc)
- MI for moving images (videos and films)
- AU for audiorecordings (includes voice and music)
- TX for print materials

Preservation or access code

- PM
- AC
- Optionally
 - RU (for rushes)
 - o BM (for broadcast masters)

Restriction code

- MEN
- OPN
- SEN
- SOR
- WOM
